Notes:

- 1) Repetitive rating; pulse width limited by max. junction temperature.
- 2)  $P_D$  is based on max. junction temperature, using junction-case and junction-ambient thermal resistance.
- 3) The value of  $R_{\theta JA}$  is measured with the device mounted on 1 in<sup>2</sup> FR-4 board with 2oz. Copper, in the still air environment with  $T_A=25^{\circ}\text{C}$ . The maximum allowed junction temperature of  $150^{\circ}\text{C}$ . The value in any given application depends on the user's specific board design.
- 4) Guaranteed by design, not subject to production testing.
